AGRICULTURE EXTENDED LEARNING GARDEN BOX

Transplants are a great way to start your garden. They are easy to grow and can be started indoors. Transplants are also a great way to save money. They are often sold in bulk and are usually cheaper than starting from seed. Transplants are also a great way to get a head start on your garden. They are already growing and will be ready to go into your garden in a few weeks. Transplants are a great way to get a head start on your garden. They are already growing and will be ready to go into your garden in a few weeks.

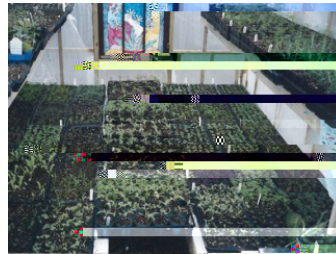

A small, low-cost greenhouse can provide transplants for many gardens.
© Lana Chisholm and Tracy Kittilsen, Dalhousie.

Hardening off is the process of gradually acclimating seedlings to outdoor conditions. This is done by exposing the plants to outdoor temperatures and conditions over a period of several weeks. Hardening off is important because it helps the plants to become more resilient to outdoor conditions. This is done by exposing the plants to outdoor temperatures and conditions over a period of several weeks. Hardening off is important because it helps the plants to become more resilient to outdoor conditions.

These seedlings are being hardened off in a protected area away from direct sun and drying winds.
